

myfile.txt

I wrote this to a file!
And now I also write this!

File pointer location
after last call of `myfile.write()`

A diagram illustrating file pointer behavior. A yellow box points to the end of the second line of text in the file. A red box points to the end of the second line of text, indicating the EOF (end of file) position. An orange arrow points from the yellow box to the end of the second line of text. A red arrow points from the red box to the end of the second line of text.

`myfile.read()` reads from the
location of the file pointer onwards.
Hits EOF (end of file) and quits
