Researcher Development

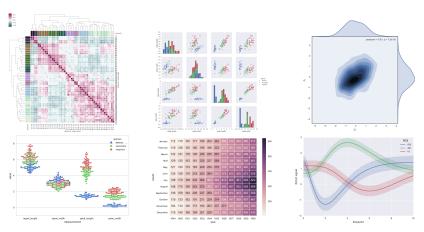

## What we've done so far

- Declare variables using built-in data types and execute operations on them
- Use flow control commands to dictate the order in which commands are run and when
- Encapsulate programs into reusable functions, modules and packages
- Use string manipulation and regex to work with textual data
- Interact with the file system
- Number crunching using NumPy/SciPy
- Publication-ready graphs with Matplotlib
- Working with data using pandas
- Next: Introducing Seaborn, an advanced plotting library

### Introduction

- Seaborn is a library built on top of Matplotlib for making attractive and informative statistical graphics
- It supports Numpy and Pandas data structures

# Reading data files: Wine

```
import pandas as pd
